Chicago Metropolitan Agency for Planning

Transportation Committee Agenda Friday July 31, 2009

Cook County Conference Room 233 S. Wacker Drive, Suite 800, Willis Tower Chicago, Illinois

1.0 Call to Order and Introductions

9:30 AM

Luann Hamilton, Committee Chair

2.0 Agenda Changes and Announcements

3.0 Approval of Minutes

The draft minutes from the June 12, 2009 meeting are attached.

ACTION REQUESTED: Approval of minutes of the June 12, 2009 meeting.

4.0 Coordinating Committee Reports

The programming coordinating committee met on July 8, 2009. There will be a brief update on the activities from this meeting.

ACTION REQUESTED: Information

5.0 Transportation Improvement Program (TIP) – Holly Ostdick

5.1 State/Regional Resources Table

The state/regional resources table has been updated to reflect the new capital bill and the updated RTA program. The table was developed in coordination with IDOT and the RTA. The table is attached.

ACTION REQUESTED: Accept State/Regional Resources table

5.2 TIP Revisions

Approval of TIP revisions that exceed amendment thresholds have been requested. The TIP Amendments and Revisions are attached.

ACTION REQUESTED: Approval

5.3 Biannual TIP/RTP Conformity Analysis and TIP Amendments

Release of the Biannual TIP/RTP conformity analysis and TIP amendments for public comment is requested. The analysis and amendments will be the subject of a 30 day comment period. See attachments.

ACTION REQUESTED: Release of the TIP Amendments and conformity analysis for a 30 day public comment period from July 31 to August 30, 2009.

6.0 Congestion Pricing Study - Peter Skosey and Rocco Zucchero

The Chicago area congestion pricing study is nearing completion. Staff from the Tollway and the Metropolitan Planning Council will discuss this work with the Committee. See attachment.

ACTION REQUESTED: Discussion. The committee members will be asked to complete an online survey in two weeks to select the top scenarios that will be considered for further study.

7.0 FFY 2010/2011 Congestion Mitigation and Air Quality Improvement Program (CMAQ) – Ross Patronsky

The CMAQ project selection committee has recommended Transportation Committee release of the proposed FFY 2010/2011 CMAQ program for a 30 day public comment period. The proposed program is attached.

ACTION REQUESTED: Release of the draft FFY2010/2011 CMAQ program for a 30 day public comment period from July 31 to August 30, 2009.

8.0 GO TO 2040

8.1 Scenario Evaluation - Kermit Wies

The development and evaluation of alternative scenarios has been a major part of the *GO TO 2040* planning process for the past two years. The preliminary results of this process are posted at www.goto2040.org/scenarios. The committee is encouraged to visit this site and make comments.

ACTION REQUESTED: Discussion

8.2 Financial Plan – Matt Maloney

Staff requests committee feedback on a potential approach for determining transportation costs for *GO TO 2040*. This work is being done to fulfill the federal fiscal constraint requirements. See attachment.

ACTION REQUESTED: Discussion

9.0 Northeastern Illinois Regional Greenways and Trails Plan - 2009 Update

Staff will update the committee on the Plan and review public comments. The public comment period for the plan was extended to Friday, July 24, 2009.

ACTION REQUESTED: Information

10.0 RTA Update

This is a standing committee agenda item for RTA to update the committee on implementation of HB 656 and other relevant topics.

ACTION REQUESTED: Discussion

11.0 Public Comment

This is an opportunity for comments from members of the audience. The amount of time available to speak will be at the chair's discretion.

12.0 Other Business

13.0 Next Meeting

The next meeting is scheduled September 18, 2009 at 9:30 a.m. in the Cook County Room.

14.0 Adjournment

Transportation Committee Minutes
Draft Minutes
June 12, 2009

Transportation Research and Analysis Computation Center (TRACC)
Argonne National Laboratory
2700 International Drive
West Chicago, IL. 60185

Members Present: Vice Chair - Chris Snyder - DuPage County, John Biessel - Cook

County, Bruce Christensen – Lake County, John Donovan – FHWA, Rocky Donahue – Pace, Heidi Files - Kane County, John Fortmann -IDOT District One, Don Kopec - CMAP, Catherine Kannenberg-

Metra, Christina Kupkowski - Will County, Jason Osborn -

McHenry County, Les Nunes – IDOT OPP, David Seglin – CDOT, David Simmons - CTA, Mike Sullivan – Kendall County, Sidney

Weseman – RTA, Rocco Zucchero– Illinois Tollway

Members Absent: Chuck Abraham - IDOT- DPIT, Bill Brown – NIRPC, Maria Choca-

Urban – CNT, Robert Hann – Private Providers, Arlene J. Mulder – Council of Mayors, Randy Neufeld - Bicycle and Pedestrian Task Force, Mike Rogers - IEPA, Joe Schofer - Northwestern University, Peter Skosey – Metropolitan Planning Council, Steve Strains – NIRPC, Vonu Thakuriah - UIC-UTC, Ken Yunker – SEWRPC, David Werner – FTA - USDOT Chicago Metro Office, Tom Zapler –

Class 1 Railroad Companies

Others Present: Len Cannata, Kama Dobbs, Henry Guerriero, John Loper, Paul

Metaxatos, John Mick II, Chad Riddle, Vodius Sokdou, Joe Spedale,

Mike Walczak, Jan Ward, Tammy Wierciak

Staff Present: Teri Dixon, Lori Heringa, Tom Murtha, Holly Ostdick, Dan Rice

1.0 Call to Order and Introductions

Chris Snyder, Vice Committee Chair, called the meeting to order.

2.0 Agenda Changes and Announcements

There were no agenda changes or announcements.

3.0 Approval of Minutes

On a motion, Mr. Seglin, seconded by Mr. Kopec the June 12, 2009 minutes were approved.

4.0 Coordinating Committee Reports

Mr. Seglin updated the TC on the June 8, 2009 Planning Committee meeting. GO TO 2040's treatment of major transportation capital projects, which are projects that significantly impact the region's transportation system was discussed. These projects generally include additions, expansions, or entirely new expressway or rail projects. The Planning Coordinating Committee recommended approval of this list to the CMAP Board. The Center for Neighborhood Technology's work to create an index that measures housing and transportation costs was discussed as the index may be relevant as part of CMAP's long-range planning work. Snapshot reports on two topics, industry clusters and air quality were presented to the committee. The industry clusters report describes industries which could be important elements of the future economy due to their concentration in the region or high growth rates. The air quality report describes air quality conditions and trends in the region, as well as the regulatory framework governing air quality. The committee also viewed the new format of the GO TO 2040 website, which will be used heavily as part of the summer public engagement.

5.0 Transportation Improvement Program (TIP)

Ms. Ostdick requested committee approval of amendments to not exempt and exempt TIP projects that exceed amendment thresholds. The four reports with amendments and revisions were posted on the web site for a seven day public comment period and no comments were received.

On a motion by Mr. Christensen seconded by Ms. Files, the not exempt and exempt project amendments were amended into the TIP. Vote: All Ayes. Motion Carried.

6.0 Regional Bridge Condition Report

Mr. Rice presented a summary report of regional highway bridge conditions as of 2007. The report explained the condition rating system, review trends and explained regional conditions. The report is posted at http://www.cmap.illinois.gov/WorkArea/DownloadAsset.aspx?id=15502.

7.0 Northeastern Illinois Regional Greenways and Trails Plan – 2009 Update

Ms. Heringa gave some history on the Northeastern Illinois Regional Greenways

and Trails Plan – 2009 Update and briefed the committee on the update.

On a motion by Mr. Osborn seconded by Mr. Weseman, the Northeastern Illinois Regional Greenways and Trails Plan – 2009 Update was released for a 15-day public comment period and recommended for consideration by the Programming Coordinating Committee. Subsequent to the meeting the comment period was extended to run through July 24. Vote: All Ayes. Motion Carried.

8.0 Public Comment

There was no public comment.

9.0 Other Business

The TRACC staff presented an overview of the facilities and the services that are available to the transportation community at the TRACC facilities. An invitation was extend for a tour following the meeting.

10.0 Next Meeting

The next meeting is scheduled July 31, 2009 at 9:30 0 a.m. in the Cook County Room in the Cook County at CMAP headquarters, 233 South Wacker Drive, 8th floor.

11.0 Adjournment

A motion was made and seconded for adjournment.

Notes: A- FHWA SAFETEA-LU apportionments for FFY 2009, FHWA, Illinois Div., Springfield.

- B- State matching resurces for FY 2010 through 2015; from the Proposed Highway Improvement Program; IDOT
- C- FTA estimates are from the FY 2009 through 2018 Prelim Capital Plan Funding Marks; RTA, July16, 2009
- 1- Statewide figures are based upon SAFETEA-LU apportionments from FHWA to the states. All forecasts assume SAFETEA-LU authorization levels. Fund estimates for FY 2010 through FY 2013 utilize the estimates for FFY 2009. Regional amounts of IDOT statewide funds will vary based upon project readiness, and are subject to IDOT priorities and obligation ceilings.
- 2- Regional figures are based on setasides for local programming, designated program funds and apportionment estimates for FTA programs.
- 3- Local match resources for regionally funded programs are from state MFT distributions as set by state law for counties and municipalities.

- 4- Sect 5307 is reduced by the estimated amounts for debt service and Preventive Maintenance.
- 5- New Start funding for FY 2009 are estimates for eligible projects and FFGA's.
- 6- RTA match sources are from regional / State taxes, operating funds, bonding authority and Tollway Credits.
- 7- RTA estimates are based on FFY 2009 FTA apportionments and actions by the the Illinois Legislature.
- 8- Additional appropriation from Road Fund and Series A bonds.
- a- Statewide figures are subject to revision. The major fund categories include Equity Bonus distributions.

MEMORANDUM

To: CMAP Transportation Committee

Date: July 26, 2009

From: CMAP Staff

Re: Biannual TIP/RTP Conformity Analysis and TIP Amendments

In accordance with the biannual conformity analysis policy agreed to in 2007, CMAP staff asked programmers to submit changes to non-exempt and exempt tested projects within the TIP. Staff received change requests for 98 projects; less than 10% of the projects had more than one action requested.

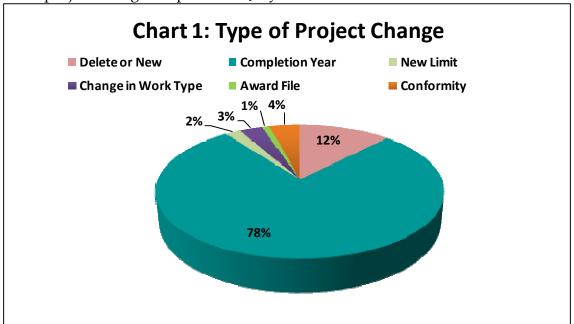

There were three changes requested that included adding, changing, or removing worktypes. Worktypes describe the work being completed in a project. Worktypes also determine if a project is exempt, exempt tested, or non-exempt.

- An exempt worktype does not require an air quality conformity analysis. Examples of exempt projects include road resurfacing and bus rehabilitation.
- Exempt tested worktypes do not require a conformity analysis, but the region has chosen to include their impacts in the travel demand model. Exempt tested projects include lane widening and new commuter parking lots.
- Non-exempt projects have an effect on air quality and must be tested for conformity. Non-exempt projects include adding lanes to a road or extending a rail line.

Other changes include six new projects and six deleted projects. Also, there were two limit changes. Limits are the cross-streets, mileposts or other boundaries which define the extent of a project.

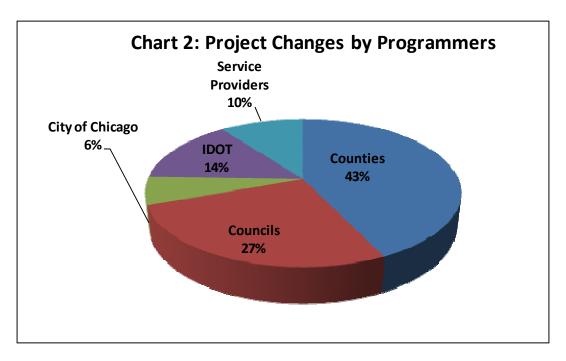

In total, seventy six projects had new completion years that required conformity analysis. Completion years indicate when a project is anticipated to be in service to users. The conformity analysis looks at certain years (currently 2010, 2020 and 2030). When a completion year change crosses one of these years, the conformity analysis must be redone. Almost half of the new completion years fall between 2009 and 2012. Most of the other completion years fall between 2013 and 2017 and a small number of the projects are for 2020 and beyond.

Chart 1 shows a breakdown of the type of project changes requested. The table below Chart 1 shows a comparison of project changes requested in July 2009 vs. March 2009.

Summary Comparison 2009											
Туре	Mar-09	Jul-09	Change								
Delete or New	31%	12%	-19%								
Completion Year	39%	76%	37%								
New Limit	20%	2%	-18%								
Change in worktype	1%	3%	2%								
Award File	0%	1%	1%								
Conformity	9%	4%	-5%								

All programmers were contacted and requested to submit any changes. CMAP staff did receive a response from all programmers and specific changes are listed in the attached reports. For a break down of changes submitted by programmer please see Chart 2. The table following Chart 2 is a summary comparison of changes by programmers in comparison to March 2009.

Summary Comparison 2009										
Agency Type	Mar-09	Jul-09	Change							
Counties	25%	43%	18%							
Councils	49%	27%	-22%							
City of Chicago	1%	6%	5%							
IDOT	19%	14%	-5%							
Service Providers	5%	10%	5%							
Tollway	1%	0%	-1%							

The 2010, 2020 and 2030 highway networks were coded to include the changes listed in the attachments. The regional travel demand model was run using the updated networks. The resultant VMT by speed and facility type for eight vehicle classes was expanded to twenty-eight vehicle types for multiplication by regional emission rates developed using USEPA's MOBILE model. The on-road emission estimates are the sum of those calculations for each precursor or direct pollutant in each scenario year. Reductions from the National Energy Policy Act Credit and Clean Fuel Fleet Program have not been claimed.

For ozone precursors, the resulting emissions estimates fell below the applicable attainment demonstration SIP budgets.

Since there are not SIP budgets for annual direct PM_{2.5} and NOx emissions, these estimates were combined with estimates from northwest Indiana, which is also part of the nonattainment area. The combine direct PM_{2.5} and NOx emissions remain below emissions estimates for 2002, the baseline year.

Northeastern Illinois Transportation Improvement Program October 8, 2009 Amendment Conformity Analysis Summary Results

Congestion Pricing

For more information visit www.metroplanning.org or contact Peter Skosey 312.863.6004 or pskosey@metroplanning.org.

What is Congestion Pricing?

Congestion pricing is an innovative strategy used to help reduce congestion, improve the environment, and promote multimodal approaches to meet transportation needs. Successful only if coupled with significant transit improvements, congestion pricing gives people the choice to pay a fee for an uncongested commute or travel on an alternative route or mode of transit. With the Highway Trust Fund becoming increasingly unsteady and congestion in our region worsening, this fact sheet will highlight places where congestion pricing has worked and explore options to improve our transit system coupled with variations of congestion pricing practices.

Why is congestion pricing being studied?

It's no secret traffic congestion in Chicagoland is bad and getting worse. Traffic is costing our region more than \$7.3 billion every year in wasted fuel, time, and environmental damages. To compete globally, our region needs to identify transportation strategies and investments that will strengthen our communities. A coordinated strategy to increase travelers' transportation options, while reducing traffic levels and increasing speeds on both expressways and arterials, will be necessary to reduce congestion without inadvertently adding to regional air pollution. Congestion pricing is one of those strategies.

Traffic along the Kennedy Expressway

Won't the traffic move from tollways and expressways into our communities?

If done correctly, congestion pricing will increase options to encourage public transportation use. London increased transit capacity by 30 percent while Stockholm and Oslo added between 6 and 9 percent additional capacity prior to implementing congestion pricing programs.

Chicago's Concrete Jungle: Kennedy, Ryan, Eisenhower Junction

What happens to the revenues collected from congestion pricing?

Once capital development and ongoing maintenance and operations costs are covered, additional funds can be used for other transportation-related initiatives - even funding transit in the corridor to address diversion.

Is congestion pricing a regressive tax?

A study from the UCLA Transportation Studies Center concluded that using the sales tax to fund roadways shifts the burden of paying for the roads to all consumers and not the users of the road. It disproportionately favors the affluent at the expense of the improverished.

Also, since congestion pricing will only be successful with complimentary transit improvements, by adding buses and increasing transit capacity, those with limited resources would also have more options to keep their transportation costs low.

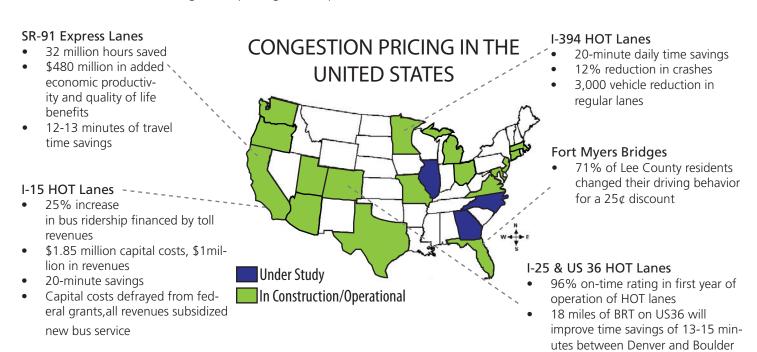

page 1 2009

Where does congestion pricing exist?

Congestion pricing is used in many industries. Airline ticket prices, phone charges, and electricity rates, for example, vary by level of demand. Even the Washington D.C. region's Metro transit system charges users higher rates for the morning and afternoon rush hours to accommodate the influx of commuters. During the holiday season or rush hours, or in congested locations, some cities incorporate congestion pricing mechanisms into their parking policies as well. This practice encourages the use of public transportation, for example, which helps alleviate traffic problems and bottleneck conditions.

CONGESTION PRICING IN THE USA

Whether a system based on peak hours or varied based on level of traffic, congestion pricing is a tool that has helped several U.S. cities address pressing traffic concerns and generate clean, healthy, and affordable alternatives for people to get where they need to go. Different approaches to congestion pricing have been tried throughout the country with varying degrees of success. Those that have produced the best results made significant investments in transit before congestion pricing techniques were introduced.

INTERNATIONAL EXAMPLES

LONDON

Congestion pricing type: 2003 Cordon pricing

\$13 charge to enter CBD

Results:

30% average drop in congestion 37% average increase in traffic speed \$174 million to reinvest in public transit

Transit

1,000 new buses to the road 85% of people entering capital take public transit

STOCKHOLM

Congestion pricing type:

2006 Cordon pricing experiment \$294 million to implement, \$50 million to operate

Results:

Daily decline of 115,000 trips per day 14% reduction of exhaust emission Removed 100,000 vehicles during peak business hours

Between 6 and 9 percent of additional capacity 197 new buses, 16 new bus lines, park-n-ride facilities

Congestion Pricing Study

For more information visit www.metroplanning.org or contact Peter Skosey 312.863.6004 or pskosey@metroplanning.org.

The Illinois Tollway, in partnership with MPC and Wilbur Smith Associates (WSA), is in the final stages of the two-year study to develop strategies that will reduce congestion in the region. The study models the impacts of congestion pricing on the Tollway, as well as IDOT expressways, and considers the diversion to local roads. It considers a range of scenarios, routes, and configurations to help reach desired goals. Some of these variables include an analysis:

- 1. By method: Variable (level of congestion) vs. Fixed (rush hours)
- 2. By time periods: Weekend vs weekday, rush hour vs. non-rush hour
- 3. By scenario
 - a. Tollways, IDOT expressways
 - b. One new lane, convert existing lane, all lanes
- 4. By vehicle type cars vs. trucks

Outreach Efforts

- Met with 11 Councils of Government, CMAP transportation committee (over 350 people)
- Held focus groups with I-PASS, Cash, Non-Tollway Drivers and trucking industry
- Conducted 2 stakeholder workshops for agency representatives and elected officials
- Received almost 2,000 responses to "Stated Preference Surveys" (I-PASS users, cash users, and Talking Transit subscribers

Workshop Results

Benefits of Congestion Pricing

Public Agency Workshop	Public Officials Workshop
1. Reinvest revenues	1. Shift traffic (reduce congestion)
2. Reduce congestion	2. Potential comprehensive solution
3. Providing alternatives	3. Mode shift
4. Traffic management	4. Save money (gas consumption)
5. Increase revenues	5. Reduce pollution
6. Environmental	6. Economic benefit
	7. Create additional revenue

Obstacles to Congestion Pricing

Public Agency Workshop	Public Officials Workshop
1. Lack of transportation options	Social equity (affordability)
2. Public acceptance	2. Lack of options (transit/transportation)
3. Lack of political will	3. Cost of implementation
4. Diversion to arterials	4. Diversion to local roads
5. Social equity	5. Public opinion
6. Public education	6. Inability to shift work hours
7. Diversion to transit (unfunded)	7. Piecemeal approach
8. Implementation costs	8. Economic impacts (businesses)
9. Determining peak hours	9. Potential to create more congestion

The study will produce a final written report that evaluates the traffic and revenue impacts of the various pricing scenarios. These results will be used to help guide regional decision-making on potential pricing strategies.

page 3 2009

Phase One: Modeling Results

The first phase of modeling results considered 27 different segments along Illinois Tollways and IDOT expressways. The segments were given rankings based on two scenarios:

Inside Lane Converted to a Managed Lane:

Managed lane added in sections less than four lanes

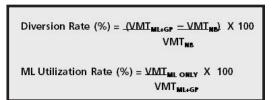

Each of the secenarios were evaluated based on four key factors:

2007 Weekday Congestion: % severely congested VMT (speed < 35mph), # hours/day of severe congestion, average peak-period speed, reliability of time (planning time index)

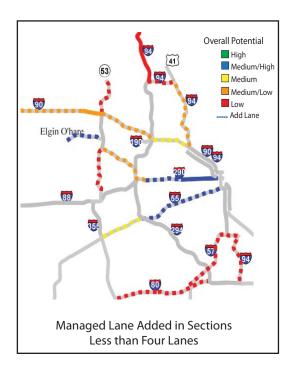

Constructability: Existing right of way, inside/outside shoulder widths, number of overpasses and underpasses, elevated sections, retaining walls, frequency of interchanges, left hand exit/entry ramps, etc.

Revenue Potential: Managed lane revenue at \$0.15/mile used to rate revenue potential, compared annual managed lane revenue to annual maintenance and operating cost of \$100,000/mile

Traffic Management Potential: High utilization at low toll rates preferred (>20%), low diversion preferred (< 5-10%)

MEMORANDUM

To: Transportation Committee

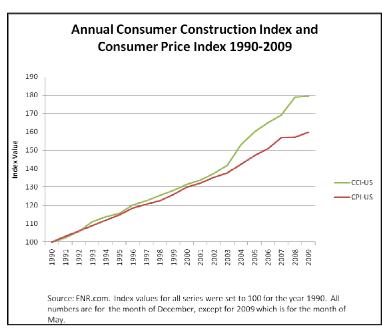

Date: July 24, 2009

From: Matt Maloney, Senior Manager Program and Policy Development

Re: Approach to Transportation Expenditures for GO TO 2040 Financial Plan

Background

As the region's long-range transportation plan, GO TO 2040 is required to demonstrate "fiscal constraint" under federal law. The expectation is that the costs of maintaining, operating, enhancing, and expanding the system should be equal to or less than the revenues that can be

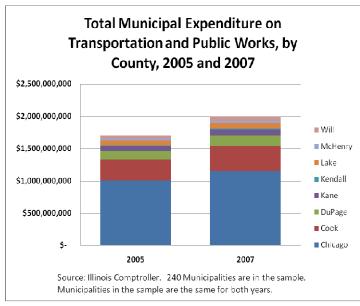

escalated far above and beyond the consumer price index. Volatile oil and steel prices appear to be largely to blame for this escalation¹.

reasonably projected for the purposes of financing transportation in the metropolitan region.

As the members of the Committee are surely aware, costs associated with transportation, particularly construction, have grown sharply in recent years. From 1990 to 2002, construction costs rose roughly in tandem with other prices in other sectors of the economy. During this period, the consumer price index represented a reasonable proxy for the increase in the cost of construction materials. However, since 2002, construction costs have

¹ Parsons Brinckerhoff, Economic Forecasting Review. Volume 3, Issue 1, May 2009.

The outlook for construction cost materials beyond 2009 is difficult to predict. While the average prices of steel and aluminum have shown some decrease in 2009 as compared to 2008, concrete prices are still expected to rise. The transportation industry depends on materials that are expected to increase in worldwide demand, due to the expanding economies of China and India. These materials are usually heavy and costly to transport. Price spurts and swings in upcoming years are anticipated, and some experts forecast 6 to 8% annual increases in the cost of these materials moving forward².

Transportation implementers have been adversely affected by these cost increases. As the graph to the left demonstrates, municipalities have been particularly affected. Expenditure on transportation and public works projects increased nearly 25% between the years 2005 and 2007 for a large sample of municipalities in the Chicago metropolitan area.

Operating costs have also been on the rise. For instance, the transit service boards have recently faced a number of operating shortfalls related to security

costs, fuel expenses, increased service costs, and other fiscal challenges³.

As costs continue to rise, various revenue sources such as the Federal Highway Trust Fund and State Motor Fuel Tax have not kept pace with inflation over recent years. Given these financial constraints, CMAP believes that it is vital for *GO TO 2040* to reflect regional priorities. While the expectation is that our region will continue to require a full spectrum of future transportation investments, the prioritization of these investments is important for fulfilling the vision of *GO TO 2040* and regional sustainability.

Approach to Analyzing Transportation Expenditures in GO TO 2040

Maintenance, operations, and smaller-scale enhancement costs will be presented as part of the *GO TO 2040* preferred scenario. Major capital projects will be selected in an accompanying process that will involve project evaluation in fall 2009 and project recommendations by early 2010. Major capital project costs will be estimated in partnership with implementers.

Financial capacity analysis in *GO TO 2040* will break expenditures into four basic categories. The following visual conveys the concept as currently envisioned:

² Simonson, Ken. "Construction Materials Trends and Outlook". The Associated General Contractors of America (AGC). June 19, 2009.

³ Regional Transportation Authority, Moving Beyond Congestion – Regional Transportation Strategic Plan. February 7, 2007.

Conceptual Cost Categories for Transportation Financial Plan

Preservation and maintenance of a safe and adequate system:

Includes resurfacing, reconstruction, bridge rehabilitation, vehicle replacement, other projects that do not add capacity to the system

"State of Good Repair" beyond safe and adequate maintenance:

Includes more frequent preservation and maintenance projects, or construction to a higher standard

Strategic or systematic improvements and enhancements:

Includes capacity additions that are not major capital projects (arterial expansions, for example), ITS improvements, new bicycle and pedestrian facilities

Major capital projects:

Includes rail or expressway additions, expansions, or new facilities – see list of proposed projects at www.goto2040.org/scenarios/capital/main

While many activities fit comfortably into only one of these categories, it is not always straightforward to make perfect distinctions in every case. Sometimes, it will be necessary for staff to make judgment calls, as the line separating activities among "safe and adequate", "state of good repair" and "systematic enhancement" will blur from time to time. CMAP does not seek or expect universal agreement on the appropriate category for every activity. Rather, the purpose of this approach is to reflect the reality that transportation investment decisions require tradeoffs, especially against the backdrop of real financial constraints.

The following sections address these cost categories in more detail, list the types of activities likely associated with each category, and CMAP's approach to quantifying the expenditures in each.

Preservation and Maintenance of a Safe and Adequate System

This first category is a necessity. The region has 3,233 miles of expressway, 18,719 miles of arterial and collector roads, 17,781 miles of local roads, nearly 1,500 miles of passenger rail track, over 6,000 vehicles of rolling stock, 311 full interchanges, 3,281 bridges, and 7,732 traffic signals. Much of the system is very old and will require major reconstruction or rehabilitation work at some point over the next thirty years. Basic maintenance such as resurfacing, bridge deck overlay, signal retiming, maintenance of rolling stock and track and structure, and maintenance of signals, electrical, and communications, is required to maintain a safe and adequate system for all users.

Types of Activities in this Section:

- Resurfacings of Expressways, Arterials and Collectors, and Unclassified and Local Roads.
- Reconstructions of some, but not all of the above.
- 1st and 2nd Deck Bridge Overlays, deck replacements and rehabilitation, and bridge replacements for some bridges.
- Retiming of Traffic Signals.
- Replacing and rehabilitating rolling stock.
- Maintaining track and structure.
- Maintaining transit signals, electrical, and communications.
- Maintenance of transit passenger facilities.

CMAP Approach to Estimating Cost:

CMAP staff has consulted with various agencies such as IDOT, the Tollway, RTA, the transit service boards, and county and municipal agencies to collect unit costs and lifecycles for these types of activities. Based upon these estimates, CMAP staff is constructing a full estimate of this cost category for the 30-year planning cycle. An important assumption is that the "safe and adequate" category does not necessarily address the entire backlog of deferred maintenance needs on the system. Rather, the system is assumed to remain in roughly the same condition in 2040 as it is today. No capacity additions are assumed in this category.

"State of Good Repair" (Additional Maintenance and Preservation Activities)

The "State of Good Repair" category includes similar types of activities to those described above. However, these types of activities would either occur with more frequency or be constructed to a higher standard. The primary assumption inherent in this category is that all maintenance and rehabilitation backlogs will be addressed by the year 2040. While there is currently no industry-wide adopted definition of "state of good repair", the Federal Transit Administration has recently addressed this issue by bringing together representatives from 14 public transportation providers and State Departments of Transportation to discuss the state of good repair of the Nation's transit system. The resulting report offers this starting point for an operational definition of this term:

"An asset or system is in a state of good repair when no backlog of capital needs exists- hence all asset life cycle investment needs (e.g. preventive maintenance and rehabilitation) have been addressed and no capital asset exceeds its useful life."⁴

In other words, "state of good repair" is achieved when capital components are replaced on a schedule consistent with their life expectancy. Again, CMAP fully appreciates that the line between "safe and adequate" and "state of good repair" is not always straightforward to define.

Types of Activities in This Section:

Essentially, the types of activities in this section will be similar to those in "safe and adequate". The main distinction is that "state of good repair" necessitates a greater frequency of maintenance and rehabilitation investments. It may also necessitate construction to a higher standard. Thus, types of activities include:

- More frequent road resurfacings or resurfacings using different materials.
- More frequent rehabilitation and replacement of rolling stock.
- More frequent retiming and modernization of traffic signals.
- More frequent rehabilitation of structures, trackwork, and other transit facilities, or reconstruction of these asset categories to a higher standard.

CMAP Approach to Estimating Cost:

This cost category assumes that by 2040, all capital components will be replaced on a schedule consistent with their life expectancy. This assumes a more aggressive maintenance and rehabilitation schedule consistent with addressing all asset life-cycles. CMAP staff has consulted with various agencies such as IDOT, the Tollway, RTA, the transit service boards, and county and municipal agencies to collect unit costs and lifecycles for these types of activities, and will prepare a full estimate of this cost category for the 30-year planning cycle.

⁴ Federal Transit Administration. *State of Good Repair: Beginning the Dialogue*. October 2008.

Strategic or Systematic Improvements and Enhancements

GO TO 2040's scenarios include descriptions and analysis of systematic improvements or "enhancements" to the transportation system. This cost category reflects the activities modeled in these scenarios. The preserve, reinvest, and innovate scenarios have been described for the Transportation Committee, and reports describing the evaluation assumptions and results are located on the CMAP Web site. Upon the release of the Plan scenarios, CMAP also released preliminary costs associated with these strategies, using a "cost-band" approach. This approach was employed to give our partners and the general public an estimate of the relative levels of investment across all major planning strategies, including transportation, land use, housing, environment, economic development, and human services. The transportation costs are based on internal staff analysis which calibrated unit or systems costs to travel model outputs. GO TO 2040's preferred scenario will include a select quantity of these systematic transportation improvements and enhancements.

Types of Activities in this Section:

- Transit System Operations Improvements
- Other Systematic Capital Improvements to Transit Facilities (e.g. Queue Jump Lanes, Designated Bus Only Lanes, Transit Signal Priority)
- Pedestrian and Bicycle Improvements
- Expansion of Paratransit Service
- Arterial Improvements in Redeveloping and Congested Areas
- Traveler Information Services
- Variable Pricing on Expressways
- Roundabouts and Other Intersection Treatments

CMAP Approach to Estimating Cost:

The types of activities listed above will be presented in more detail as part of *GO TO 2040*'s preferred scenario. CMAP staff is preparing more robust estimates for the costs associated with these types of activities. These costs are based primarily on internal staff research on the recent costs of deploying these types of strategies, both in our region and across the country.

Major Capital Projects

Only a small subset of transportation projects are considered "major capital projects". They are large projects with significant effect on the capacity of the region's transportation system, including extensions or additional lanes on the interstate system, entirely new expressways, or similar changes to the passenger rail system. Arterial expansions and intersection improvements are not defined as major capital projects; neither are bus facilities, unless they involve a dedicated lane on an expressway. This definition is consistent with federal guidance as well as the definition of major capital projects used in past regional transportation plans prepared by CATS.

A list of major capital projects under consideration for inclusion in *GO TO 2040* is available online at http://www.goto2040.org/ideazone/default.aspx?id=15130. Many of these projects were considered in developing the CATS 2030 Regional Transportation Plan, and have been updated with new information from project sponsors when available. New project suggestions are welcome and will be solicited through the public engagement activities over the summer.

Types of Activities in This Section:

- Extensions or Additional Lanes on the Interstate System
- New Expressways
- Transit System Extensions
- Major New Expressway Interchanges

CMAP Approach to Estimating Cost:

Each major capital project must be accompanied by a cost estimate. CMAP staff requests these estimates from project sponsors. If no estimate is received, CMAP staff will utilize unit costs and other recent historical information to estimate project costs.

CMAP staff welcomes and appreciates all feedback from the Transportation Committee during the construction of the Plan's fiscal constraint.

ACTION REQUESTED: Discussion.
